RELEVANT WORK EXPERIENCE

AI Engineering Intern · Prudential Assurance Company Singapore

Jan 2026 – Aug 2026

- Refined PruProduct Buddy, a WhatsApp insurance product-knowledge chatbot (RAG-powered, real-time inference) for financial consultants, by restructuring its knowledge base and retrieval workflows
- Led model migration across LLM vendors on a vendor-agnostic LangGraph + Google ADK architecture, exploring explicit and implicit caching to cut token costs, then drove it into production
- Ran regression and unit testing on PruAction — an AI performance tracker batch-processing daily data for 5,000 consultants — with post-production monitoring for reliable daily runs

AI Engineering Intern · Prudential Assurance Company Singapore

May 2025 – Aug 2025

- Built PruProduct Buddy from the ground up, owning the chatbot architecture and MCP integration end-to-end
- Built PruAction end-to-end, engineering the batch pipeline behind its daily consultant analytics
- Implemented retrieval pipelines with Azure AI Search and vector embeddings; ran unit, edge-case, and stress testing for enterprise deployment

Product Management Intern · AsiaVerify

May 2024 – Aug 2024

- Designed request/response API contracts for the core compliance-data product, then enabled sales to position and sell it
- Onboarded SE Asian registry data (Indonesia, Philippines) and shipped continuous monitoring as a standalone feature for AML workflows
- Translated compliance requirements into backend features across design, engineering, and sales

Data Science Intern · Setel Ventures

Jan 2023 – Jun 2023

- Rebuilt customer top-up and fuel segmentation models (K-Means), lifting business value +25% and +30%
- Built a gig-worker prediction model with semi-supervised learning, hitting 80% accuracy for campaign targeting
- Refactored the fraud detection pipeline, cutting runtime 20%

PROJECTS

Products of AI System Resources (co-founded)

EMDEE – AI-first Context Manager (emdee.vercel.app)

- Built a local-first knowledge graph + MCP server: a plain-markdown vault as single source of truth, read by both a human renderer and the LLM
- Engineered schema-aware atomic write tools and a Postgres-materialized edge graph for fast multi-hop context retrieval
- Added multi-user sharing — OAuth invites, ACL, hierarchy cascade

ATLAS – Agentic Trading System · Capstone, SIT (atlas-broker.vercel.app)

- Built a multi-agent pipeline (Technical, Fundamental, Sentiment, Synthesis, Risk, Decision agents) in LangGraph.js + Gemini, producing confidence-scored BUY/SELL/HOLD signals
- Designed an Execution Boundary Controller for configurable execution authority (Advisory vs. Autonomous, 5-min override) — the differentiator no retail platform offers
- Engineered a backtesting engine with as_of_date guards against look-ahead bias; full-TypeScript stack (Next.js, Inngest, Supabase + MongoDB, Alpaca via a swappable broker adapter)

DOUBLELEAD – AI-first Lead Manager (doublelead.io)

- Architected an operator-first CRM unifying capture → pipeline → follow-up → invoicing on one shared context object — the moat is “owning the chain”

- Built 5 cloud MCP servers (46 tools) on a shared OAuth 2.1 + PAT factory so any Claude surface connects with a single token
- Scaled to ~80 API routes, 75+ migrations, and 86+ shipped sprints; Next.js 16, Supabase, Inngest, Clerk, Stripe, Groq

EDUCATION

Bachelor of Science in Applied Computing (Fintech)

Aug 2023 – Aug 2026

Singapore Institute of Technology

cGPA: 4.69 / 5.00 (Top in Cohort) | ASEAN Scholarship 2023 – 2026

SKILLS

AI/ML: RAG, MCP servers, multi-agent orchestration (LangGraph), vector search (Azure AI Search, pgvector), knowledge graphs, model migration, caching · Gemini, Groq, Google ADK

Languages: Python, TypeScript, JavaScript, Java, C, SQL, HTML/CSS

Frameworks: FastAPI, Next.js

Infrastructure: Supabase, MongoDB, Inngest, Vercel, Databricks, Clerk, Stripe

HACKATHONS

Champion · Hackomania 2026

- Built an AI-powered energy dashboard for SP Group

1st Runner-Up · Pan-SEA AI Developer Challenge 2025

- Built an AI-powered scam-detection web extension on the SEA-LION model

2nd Runner-Up · SingHacks 2025

- Built an agentic payment framework using x402 on Hedera

LEADERSHIP EXPERIENCE

President · Fintech Student Council

Jan 2024 – Dec 2024

- Led an 8-person executive team delivering academic and welfare programming; initiated the council's flagship industry partnership with Web3 education platform Hooked Protocol — sustained across 3 collaborations in 3 years

Secretary · SIT Developer Club

Jan 2024 – Dec 2024

- Ran operations, scheduling, and communications across the club's 6-person core committee

SIT Ambassador

Jan 2024 – Dec 2026

- Represented SIT at public-facing engagements, including ministerial dialogues

Year 3 Representative · Fintech Student Council

Jan 2026 – Dec 2026

- Re-elected for a second council term to represent the graduating cohort, supporting juniors with industry experience and connections

GFTN Next Gen Leaders

Nov 2025 – Present

- Selected as 1 of 25 in GFTN's inaugural 2025 Next Gen Leaders cohort, chosen from a global pool spanning academia, founders, and builders
